

## **New Technologies Have Helped Lower Redding Homeowner's Insurance**

Can you believe all the new innovations that are available for your home? Many new technologies can help you in the kitchen, help keep your home cooler in summer, and some even reduce your Redding [homeowner's insurance](#) premiums. Here is a recent quote from an insurance company, "If somebody has some sort of temperature-monitoring system in their house, we give them a discount for that."

Here are a few technologies that will help keep your home safe, and will also lower insurance costs.

1. Security systems -- It seems like everywhere you go, there's a camera capturing images. If you own a smartphone or tablet, you probably have a camera that's built into the device. You can not only secure your home, but actually see what is going on through videos.
2. Electronic locks -- Nowadays you don't even need a key to get into your home! These electronic locks can add additional security to your home.
3. Connected appliances -- Appliances that you can turn off and on from your smart phone not only help with your lifestyle, but also keep your home safe.
4. Leak detection systems -- Smart homes can be controlled from your phone, and when connected to your home's water and electrical system, can provide you with real-time updates on how these systems are performing. If you are using more water than normal, you will be notified that there is likely a leak present.
5. Timed lighting -- Having outside and inside lights come on during the evening while you are away deters burglars.
6. Smoke and fire detectors -- Having good detection systems keeps your family safe and insurers provide discounts for these.
7. Home weather warning systems -- There are weather warning programs that can detect high winds and identify severe weather earlier than ever before.

At Berry Curtis Insurance, we're committed to keeping your home protected – so you can focus on your needs. And with the right insurance plan, your [personal insurance](#) will be covered from top to bottom. We are ready to help you better understand your risks. Please call our office today.
